25 Series

60' Bulk Yield-Pro® Planter

Great Plains proudly introduced the industry's first 60' planter with the ability to plant 15" and Twin-Row 30" (20" and 30" spacings are also available). The YP-2425 features a floating hitch design that provides the flexibility to meet challenging terrain. Yet, the 60' Yield-Pro model easily folds to a transport width of only 13' 6". The telescoping tongue retracts in field position for short headlands and outstanding maneuverability.

The Great Plains YP-2425 Planter can be equipped with two 82-bushel poly hoppers or two seed company's bulk seed boxes. With its 164-bushel capacity, it can easily plant up to 160 acres of soybeans or 250 acres of corn in one fill. This increases efficiency by approximately 52% in soybeans and 12.8% in corn, when

compared to a planter with individual hoppers. Like all Yield-Pro Planters, the YP-2425 uses air to gently move seed from the bulk hopper to the individual row meters mounted on field-proven 25 Series Openers. Choose from the Air-Pro® Seed Metering System, Precision Planting Population Max™ (Finger Pickup), or the Singulator-Plus™ Meter.

Add an optional 500-, 735-, or 1,000-gallon semi-mounted cart, and apply starter or high-rate fertilizer at planting time to minimize passes and fuel usage. The YP-2425 row units can be equipped with a wide range of attachments, including coulters and row cleaners. Any way you equip it, the YP-2425 Yield-Pro® is designed to increase productivity and improve yields on your farm.

Features & Benefits

BULK SEED BOXES - Poly hoppers and seed companies' bulk seed boxes are completely interchangeable.

FERTILIZER CARTS - Choose from three different optional fertilizer carts, available in 500-, 735-, or 1000-gallon (shown) configurations. All carts are 2-point mounted for excellent handling.

TELESCOPING TONGUE - The telescoping tongue puts the planter closer to the tractor in field position, allowing tighter turning on end rows.
