

FEATURES & BENEFITS

4-SPEED GEARBOX - Lifetime lubricated heavy duty gearboxes make seed rate changes quick and painless.

3-POINT MOUNTED - Category 1 and Category 2 hitch for easy mounting to different tractors.

SMALL SEEDS ATTACHMENT - Utilizes a smaller version of the fluted feed cup to accurately meter tiny seeds like alfalfa and wildflowers.

Small Drills, Big Features

5' (3P500) and 6' (3P600) Min-Till Drills are designed to get into places big drills simply can't, like wooded areas, orchards and vineyards. These machines excel when seeding into fully prepared and minimum tillage plots. Add the optional small seeds box and plant 2 different seeds at the same time. 3P500's & 3P600's are ground driven and feature 4-speed gearboxes for fast seed rate changes.

The rugged 00 Series openers (see page 22) provide accurate and consistent seed placement. Openers have 7" of stagger to allow residue to easily flow through the unit. Inside the opener our full length seed tube gently guides the seed all the way to the bottom of the trench and a seed flap makes sure the seed stays in the trench. Competitive drills drop the seed at

the center of the opener disks allowing it to "bounce" into the trench producing erratic seed depth control. The trailing press wheels maintain proper opener depth, close the seed trench, and firm the seed into the soil. T-handles quickly adjust the press wheels and allow for small incremental changes in planting depth.

Other features found on these models include: a highly visible seed level indicator; extremely accurate fluted feed cups; v-bottom inserts on the inside of the seedbox that allow all the seed to be metered; a convenient crank to calibrate seed; water tight lids that stay open for filling; and, splash guards to keep seed from spilling out. All Great Plains compact drills are powder painted for long lasting good looks.
