

3P606NT Model Shown With Optional Small Seeds

Mounted Versatility

3P606NT models are 3-point mounted no-till drills, allowing you to get close to field edges and with our proven ground drive no remote hydraulics are needed.

This is a heavy duty no-till drill loaded with features like 450 lbs. pre-loaded coulters, a calibration crank, ground driven metering system, rain tight seed box lids, and the world's finest double disk no-till opener. The rugged 6' seeder is ideal for limited space situations and maneuvering among trees and other obstacles. The lead coulters have 4" stagger to aid in residue flow and prepare a mini-seedbed for the O6 series openers to plant into. Coulter options include fluted and our exclusive Turbo blades.

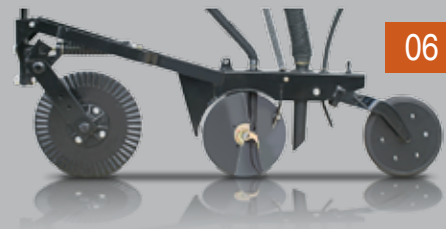

All 3P606NT's come standard with a fluted feed seed box. Add a native grass box for seeding fluffy native grass mixes that include seeds like big and little bluestem and smooth brome. You can further increase your options by adding a small seeds box. It is a smaller version of our standard fluted feed box and is used to accurately meter small seeds such as clover and alfalfa. Add both and seed 3 different types of seed at the same time all at different rates.
