

## Seedbed Perfection

Add a Great Plains Precision Seedbed Conditioner to your present finishing tool and prepare the perfect seedbed. Firm the soil, reduce air pockets, incorporate chemicals, break up surface clods, knock soil off the reel crowns and prevent wind and water erosion. Create a one-pass unmatched seedbed that places the finer particles of soil in the planting zone, which will allow perfect seed to soil contact and will boost the emergence of your crop. All reel sections overlap for superior finish and no streaking. Unmatched flexibility, wings flex up and down 15°, allowing the conditioner to follow the contour of the ground.

- Optional hydraulic weight transfer assures even weight on all sections in rolling terrain.
- One hydraulic circuit to control lift and fold as well as weight transfer for ease of operation.
- Adjustable hitch length to match the host machine for optimal turning radius.
- Triple lip sealed bearing with 1 1/2" round gang shafts on every section.
- Heavy duty design offers up to 150 lbs. of weight per foot for increased clod and root ball breakage.

## FEATURES & BENEFITS

**HYDRAULIC WEIGHT TRANSFER** - Transfer valve transfers weight from center to wings providing even, constant down pressure to the full width.

**SINGLE HYD. CIRCUIT** - This feature allows a simple and a quick way to attach to the host machine.

**16" DIAMETER REELS WITH 1" RODS** - For higher strength and resistance to damage from stones.

**SPRING CUSHIONED REELS** - Spring cushioned reel sections with maintenance free pivot points.
