

00HD SERIES OPENER

PRESS WHEEL CHOICES

2" x 13" Single - This design presses soil directly over the seed, aggressively firming the soil surrounding the seed at the precise depth selected.

3" x 13" Center Rib - This design firmly presses seed directly over the seed with the center rib of the wheel creasing the soil. This crease allows the crust to crack open for even seed emergence.

1" x 12" Double -V - This design closes the seed trench with an aggressive pinching action. It provides excellent depth control in most soil conditions.

Wedge - The "Best of Both Worlds," with an aggressive tapered edge it closes seedbeds in firm soil but a large "footprint" allows it to stay on top in loose soil.

3" x 14" Peak - This design presses a deep furrow with a defined ridge to capture snow and rain. The 3" x 14" peak press wheel helps reduce wind erosion in lighter soils and arid climates.
Note: Recommended for arid areas only.

00HD SERIES OPENER OPTIONS

A spring loaded Seed-Lok® wheel presses the seed into moist soil at the bottom of the seed trench, providing excellent seed-to-soil contact. The result is even emergence, since seeds are planted and firmed at the same depth.

Keeton Seed Firmers are designed to guide the seed to the bottom of the trench and firm it there creating seed-to-soil contact. Liquid fertilizer can be delivered to the trench which enhances emergence and maximizes fertilizer dollars.

Optional Air Design Scrapers feature a special tungsten carbide cutting edge that will outlast and outwear standard scrapers. The aggressive scraping action is ideal for higher residue, moist conditions.
