

FILTER COMPARISON

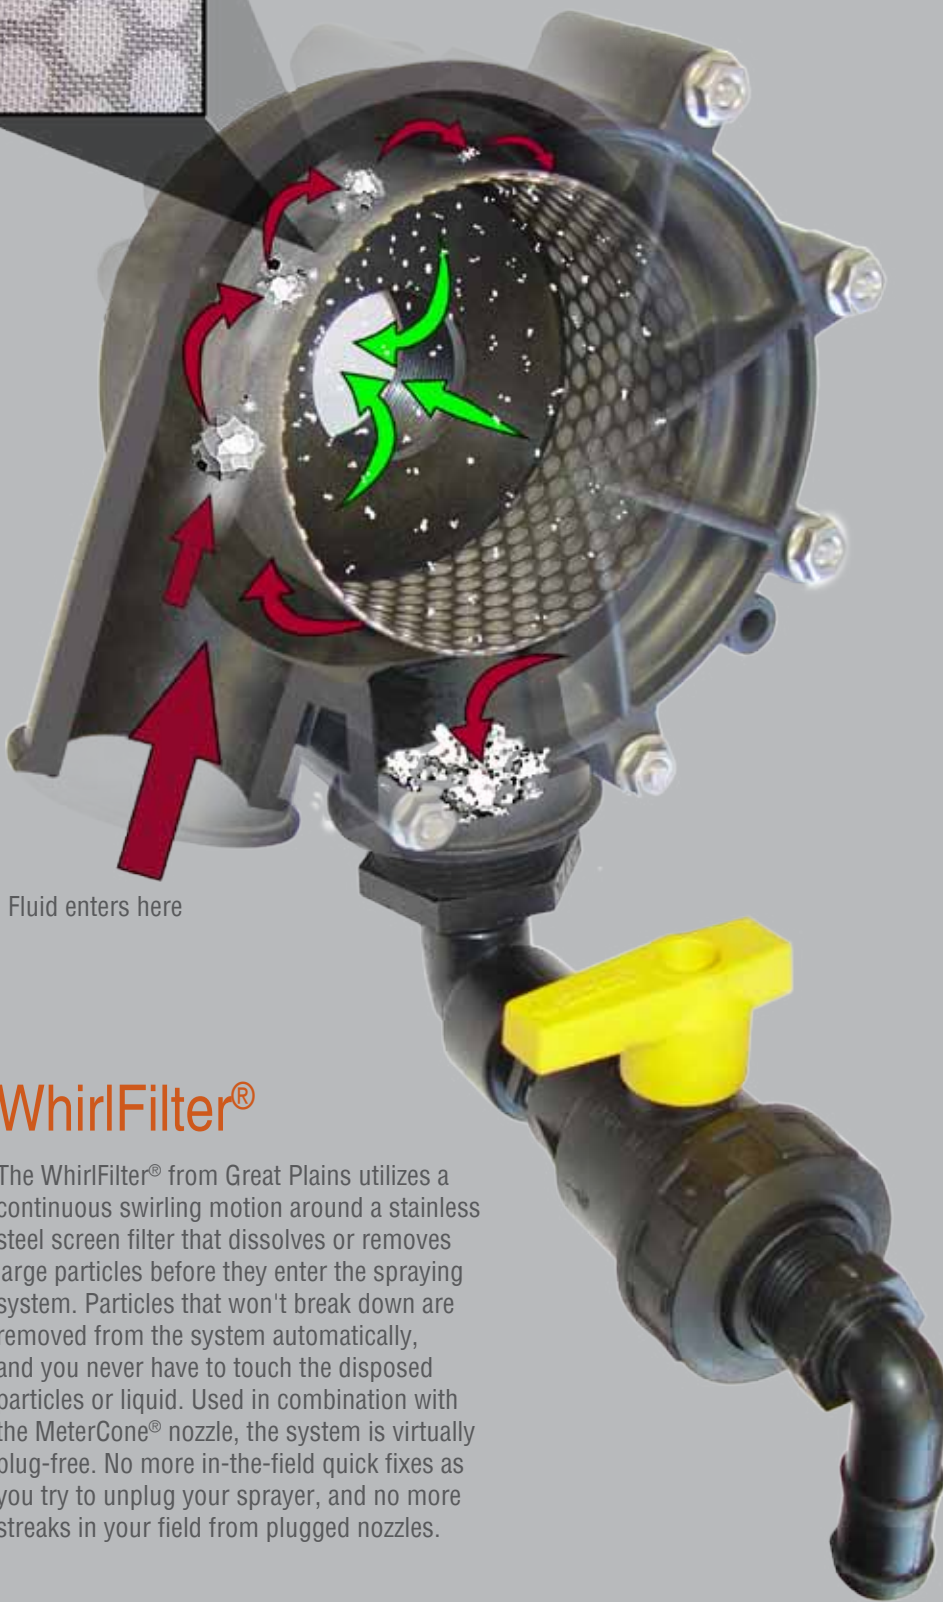

WHIRLFILTER® - Servicing the WhirlFilter® is safe and easy. Simply open the clean out valve and captured debris is flushed away without ever having to touch the chemicals.

COMPETITIVE CANISTER/T-LINE FILTERS - Can plug or bypass, not self-cleaning, creates pressure drops, and unsafe.

WhirlFilter®

Fluid enters here

WhirlFilter®

The WhirlFilter® from Great Plains utilizes a continuous swirling motion around a stainless steel screen filter that dissolves or removes large particles before they enter the spraying system. Particles that won't break down are removed from the system automatically, and you never have to touch the disposed particles or liquid. Used in combination with the MeterCone® nozzle, the system is virtually plug-free. No more in-the-field quick fixes as you try to unplug your sprayer, and no more streaks in your field from plugged nozzles.
